Arctic - Wikipedia Climate. Due to the poleward migration of the planet's isotherms (about 35 mi (56 km) per decade during the past 30 years as a consequence of global warming), the Arctic region (as defined by tree line and temperature) is currently shrinking. Perhaps the most alarming result of this is Arctic sea ice shrinkage. What lies beneath: Robert Macfarlane travels 'Underland ... What started as a journey into pure matter became, to my surprise, an exploration of hidden human depths. Underland was composed in anticipation of that future reader's scrutiny. It moves over.
